The probability of getting a square number when rolling a dice is \( \frac{1}{3} \).

What is the probability of not getting a square number?

\[
3 \frac{1}{2} - 2 \frac{2}{3}
\]

The probability a train arrives in Antrim on time is 0.7.

If 50 trains arrive in one week, how many will be on time?

What is the gradient of this line?

What is the equation of the line?
