

25th Dec	
Expand and simplify $(\sqrt{10} + 2)(\sqrt{10} - 2)$	 Corbettmaths
The point B has coordinates (1, 3) and the point C has coordinates (7, m) The line BC has equation $4x + 2y - 3 = 0$	Find m
Find the midpoint of BC	
Solve $25^x = 125^{6-x}$	
Given $y = \frac{1}{3}x^6 - 2x^4 + 3x^2$ Find $\frac{dy}{dx}$
