Find x

Simplify

$$\frac{2x}{y} \times \frac{y}{4}$$

Simplify

$$\frac{c}{4} \div \frac{3}{c}$$

A tree grows 22% each year.
When planted, it is 20cm tall.

How long will it take the tree to grow to a height of 5m?

Find the size of y.

Work out the bearing of B from A.

Work out the bearing of A from B.
