Simplify

$$(25w^8y^6)^{\frac{1}{2}}$$

Find  $x$ 

Archaeology Graduates

Write down the value of the median

Harry gets the train to work in the morning.  
He works Monday to Friday.  
The probability the train is late is 0.2

Find the probability the train is late exactly once.

Make  $g$  the subject of  $5g + w = ag + c$
