Corbettmaths

£3 x number of miles

The formula above shows how to work out the cost of a taxi journey.

Work out the cost of an 8 mile journey

$$8 \times 3 = \text{£}24$$

Work out the cost of a 27 mile journey

$$27 \times 3 = \text{£}81$$

A journey costs £54.
Work out how far it was.

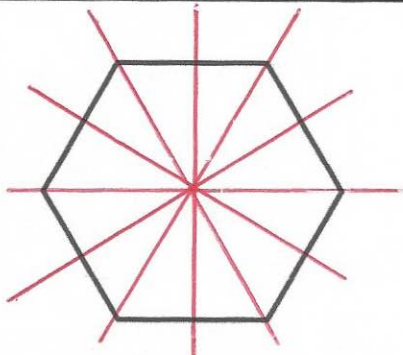

$$54 \div 3 = 18 \text{ miles}$$

Write 0.06 in words.

Six hundredths

Plot the coordinate (1, -2)

Shown is a regular hexagon.

On the diagram draw in all the lines of symmetry
