

January 30th

$$\text{If } 3(11x - 18y) = 6(x + y) - 3x - 10y$$

Then

$$33x - 54y = 6x + 6y - 3x - 10y$$

Hence

$$30x = 50y$$

Therefore

$$\mathbf{x:y = 5:3}$$
