

June 2nd

Two circles, with centres A and B have radii a and b. The circles touch each other and also the line PTQ at P and Q.

Find the length of PQ.

A third circle touches both circles and the line PTQ at T.

If its radius is x, find PT and QT in terms of x, a and b.

In the triangle ARB

R is a right angle

$$AB = b + a$$

$$BR = b - a$$

$$AR = PQ$$

Hence

$$PQ^2 = (a + b)^2 - (b - a)^2 = a^2 + 2ab + b^2 - (b^2 - 2ab + a^2) = 4ab$$

Therefore **$PQ = 2\sqrt{ab}$**

Using the same argument, **$PT = 2\sqrt{ax}$** and **$TQ = 2\sqrt{bx}$**
