

3rd April $y = 2x + 1$ $y = \frac{1}{2}x - 4$ $y = x + 1$ $y = -\frac{1}{2}x - 3$ $y = 10 + x$	Corbettmaths Which two lines are parallel?
Which two lines are perpendicular?	Write down the equation of the line parallel of $y = 2x + 5$ that passes through the point (1, 10)
Convert 3.3333333... into a mixed number	
	Find angle ACB
A bag contains 10 counters. 7 of the counters are red 2 of the counters are purple 1 of the counters are white Sharon chooses a counter at random, records the colour, then replaces it. Sharon then chooses a second counter at random and records the colour.	What is the probability that both counters are the same colour?
