

8th January		Corbettmaths
Solve the simultaneous equations $x^2 + y^2 = 9$ $y = x + 3$		
Find the coordinates where $y = 2x^2 - 7x + 3$ crosses each axis.		
Sketch $y = \tan x$ for $0 \leq x \leq 360$		
	Prove that the angle at the centre is twice the angle at the circumference.	
Given that $125x = 25x+5$ Find x
