

17th June	Corbettmaths 
Shown is $f(x)$ 	Sketch the function $-f(x)$ 
Write 32 in the form 8^n	
$f(x) = \frac{kx + 2}{4}$ $g(x) = 2x + 5$ <p>Given $fg(4) = -9.25$</p> <p>Work out the value of k</p>	
<p>Prove the angles in a triangle add up to 180°.</p> <p>Hint: consider parallel lines.</p>
