

7th March		Corbettmaths
<p>Sophie estimated that the distance between Bristol and Newcastle is about 290 miles and that her average driving speed would be 60 mph.</p> <p>She estimated the distance to the nearest 10 miles and the speed to the nearest 10 mph.</p> <p>Calculate the lower bound of the time the journey should take. Give your answer in hours and minutes. Give your answer to the nearest minute.</p>		
<p>260 people sit a driving theory test. Their results are shown in this histogram.</p>		
Solve the simultaneous equations		<p>10% of the people scored less than x marks Find x</p> <p>5% of people scored more than y marks. Find y</p>
$x^2 + 3xy = 10$ $x + 2y = 3$
