

11th May		Corbettmaths
Simplify $\sqrt{2} \times \sqrt{3} \times \sqrt{2} \times \sqrt{3}$	Simplify $\sqrt{10} \div \sqrt{5}$	
A lead rod is placed on a table.	Work out the pressure in newtons/m ²	
 <p>The rod is a cylinder with diameter 8cm and height 20cm. The force exerted on the table is 111.72 newtons.</p>		
	Find the perimeter of the shape.	
Solve $5y^2 + 8y - 100 = y^2 + 4y - 37$
