

14th July		Corbettmaths
$f(x) = \frac{4x}{9} - 8$ Find $f^{-1}(-10)$		
	The graph shows the speed of a bicycle between two houses. Calculate the distance between the houses.	
	Write down the equation of the circle Find the equation of the tangent at the point P.	Here is a circle, centre O, and the tangent to the circle at the point (6, 8).
Work out $27^{-\frac{2}{3}} \div 0.2\dot{5}$
