

Give an example of a “discrete variable”

Helen, Barry and Nick won £420 in a competition.

The pie chart shows how they shared the money.

With the money Barry won, he spent some and invested some, in the ratio 5:2.

How much money did Barry invest?

A stadium holds 16000 fans to the nearest hundred.

Write down the least possible number of fans that the stadium holds.

Write down the greatest possible number of fans that the stadium holds.

There are approximately 5×10^4 grains of rice in a one kilogram bag of rice.

Approximately how many grains of rice will be in 20 one kilogram bags of rice?
