

Find a and b

Draw the graph of $y = 2^x$
for values of x from -4 to 4

Arrange in order, from smallest to largest

$$5 \times 10^{-1} \quad 10^{-4} \quad 2 \times 10^{-4} \quad 10^{-2}$$

m is 20% more than n.
n is 15% more than p.

What percentage is m more than p?
